

PROFESSIONAL SUMMARY:

- Results-driven **DevOps Engineer** with **10+ years of experience** in designing, automating, and securing **cloud infrastructure** across **AWS, Azure, and GCP**, specializing in **Infrastructure as Code (IaC), CI/CD pipeline automation, containerization, and cloud security**. Proficient in **Terraform, CloudFormation, Ansible, and Helm** for infrastructure provisioning, with strong expertise in **Jenkins, Docker, JFrog Artifactory, and microservices architecture**, ensuring scalable, resilient, and efficient software delivery.
- Designed and implemented **CI/CD pipelines** using **Jenkins, GitLab CI/CD, Azure DevOps, AWS CodePipeline, and ArgoCD**, automating build, test, and deployment workflows for seamless software delivery. Proficient in **Docker and Kubernetes (EKS, AKS, GKE, OpenShift)** for container orchestration and microservices deployment, with expertise in **service mesh implementation (Istio, Linkerd)**. Strong hands-on experience in **Linux administration, scripting (Python, Bash, PowerShell, Go), and Git-based version control**, ensuring efficient, automated, and scalable infrastructure.
- Hands-on experience with **AWS, GCP, and Azure** for cloud infrastructure management.
- Extensive experience with **Jenkins Shared Libraries**, scripted pipelines, and declarative pipelines for **enterprise-grade automation**.
- Integrated **JFrog Artifactory** and **Nexus Repository** for secure artifact management, ensuring efficient versioning, storage, and dependency management.
- Automated release management processes using **Jenkins, Ansible, and Terraform**, ensuring consistent deployments across multiple environments.
- Developed and maintained **Ansible playbooks** for automating infrastructure provisioning, configuration management, and application deployments across cloud environments like **AWS, Azure, and GCP**.
- Implemented **multi-branch pipelines** to support different environments (dev, test, staging, production) with automated triggers based on code commits and pull requests.
- Implemented and managed end-to-end application performance monitoring using **New Relic** across **EC2, Kubernetes**, and on-prem environments, analyzing **APM** traces and transaction data to identify bottlenecks, optimize micro service response times, tune alert policies, and collaborate with development teams to improve reliability and reduce errors.
- Integrated **Jenkins with Docker and Kubernetes**, enabling containerized builds, scalable deployments, and orchestration using **Kubernetes agents for dynamic workload management**.
- Automated security scanning in Jenkins pipelines using **SonarQube, Snyk, Checkmarx, and Trivy**, ensuring compliance and vulnerability detection before deployment.
- Configured **Jenkins pipeline as code** using **Jenkinsfile**, enabling version-controlled, reusable, and modular pipeline workflows.
- Implemented **parallel and sequential job execution** in Jenkins to optimize build efficiency and reduce overall pipeline execution time.
- Integrated **Slack, Teams, and email notifications** into Jenkins pipelines for real-time alerts on build status, failures, and deployment completions.
- Leveraged **Jenkins Shared Libraries** to standardize CI/CD workflows across multiple projects, ensuring code reusability and maintainability.
- Optimized Jenkins performance by implementing **agent-based distributed builds**, caching strategies, and reducing unnecessary job executions.
- Proficient in **Docker**, containerizing applications for lightweight, portable, and consistent deployments.
- Familiar with Docker components, such as Docker Engine, Docker-Hub, Docker-Compose, Docker Registry, Docker Swarm, and Kubernetes.

- Built and optimized **Kubernetes clusters (EKS, AKS, GKE, OpenShift)** to manage **microservices architectures**, scaling applications dynamically with **Helm, Istio, and Linkerd** for service mesh implementations.
- Configured **Docker Compose and Kubernetes manifests (YAML, Helm charts)** for efficient multi-container deployments.
- Implemented **auto-scaling, rolling updates, and blue-green deployments** to ensure high availability and zero-downtime upgrades.
- Designed and deployed **microservices architectures** using **Spring Boot, Node.js, and Python**, ensuring scalability and modular development.
- Strong hands-on experience in **scripting and programming languages**, including **Python, Bash, PowerShell, Go, and YAML**, for infrastructure automation, configuration management, and monitoring.
- Integrated **API gateways (AWS API Gateway, Nginx)** to manage and secure microservices communication.
- Implemented **distributed tracing and observability** for microservices using **Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, and OpenTelemetry**.
- Implemented monitoring and observability solutions using **CloudWaze** for centralized log analytics, infrastructure visibility, and proactive alerting across distributed cloud environments.
- Leveraged CloudWaze dashboards and automated alert workflows to improve incident detection, root cause analysis, and operational reliability.
- Expertise in **event-driven architectures** with **Kafka, RabbitMQ, AWS SNS/SQS**, ensuring reliable message processing and decoupled service communication.
- Implemented **DevSecOps** practices, integrating security tools like **Snyk, SonarQube, Twistlock (Prisma Cloud), AWS Security Hub**, and **HashiCorp Vault** into CI/CD pipelines.
- Enforced security best practices in **Docker images, Kubernetes RBAC, IAM policies, AWS WAF, and TLS encryption** for cloud-native applications.
- Automated **infrastructure security scanning** using **AWS Inspector, Aqua Security, and Falco** to detect vulnerabilities in containers and cloud environments.
- Configured **end-to-end monitoring** using **CloudWatch, Prometheus, Grafana, ELK, Splunk, Dynatrace, and New Relic** to proactively manage system performance.
- Implemented **log aggregation** and **distributed tracing** to troubleshoot performance bottlenecks in microservices-based environments.
- Optimized **resource utilization and cloud cost management** with **AWS Cost Explorer, Azure Cost Management, and FinOps** best practices.
- Passionate about **automation, cloud security, and reliability engineering (SRE)**, continuously driving improvements in **performance, scalability, and efficiency**. Collaborative team player with a track record of **leading DevOps transformations**, mentoring engineers, and optimizing development workflows for faster, more reliable software delivery.
- Performed **automated software patching and security updates** using Ansible playbooks, ensuring systems remain up-to-date and compliant with security standards.
- Integrated **Ansible with Jenkins** to trigger automated deployment pipelines, reducing manual intervention and enhancing DevOps workflow.
- Integrated **Ansible with Docker** to automate container deployments, build images, and manage container lifecycle across **Kubernetes clusters and on-premises servers**.
- Used **Ansible Vault** to securely manage sensitive data, including passwords, API keys, and certificates, in playbooks and environment
- Utilized **Ansible modules** such as **ec2, s3, rds, iam, and ecs** for AWS resource management, automating tasks like instance creation, S3 bucket management, RDS setup, and IAM role configurations.
- Experienced in **Content Delivery Networks (CDN)** such as **AWS CloudFront, Akamai, and Fastly**, optimizing global content distribution for improved performance, latency reduction, and security enhancement. Proficient in

blue-green deployments, canary releases, and rolling updates to ensure zero-downtime application releases, reducing risks associated with production deployments while enabling seamless rollback strategies.

CORE COMPETENCIES

Cloud Infrastructure & Automation

- **Cloud Platforms:** AWS, Azure, GCP
- **Infrastructure as Code (IaC):** Terraform, CloudFormation, Ansible
- **Containerization & Orchestration:** Docker, Kubernetes (EKS, AKS, GKE, OpenShift), Helm, Istio, Linkerd
- **CI/CD Tools:** Jenkins, GitLab CI/CD, Azure DevOps, AWS CodePipeline.
- **Configuration Management:** Ansible (Playbooks, Roles, Modules)
- **Version Control:** Git (GitHub, GitLab, Bitbucket)

Programming & Scripting

- **Languages:** Python, Bash, PowerShell, Go, YAML
- **Automation & Scripting:** Shell scripting, Python automation, infrastructure tools
- **Build Automation:** Jenkinsfile, Ansible Playbooks, Dockerfiles, Helm charts
- **Security & Compliance:** SonarQube, AWS WAF, F5

Networking & Security

- **Cloud Networking:** VPC, Subnets, Route 53, Load Balancers (ALB/NLB), DNS, DHCP, VPN
- **IAM & Permissions:** AWS IAM, Security Groups
- **Network Security:** TLS encryption, AWS WAF, VPN,
- **Security Automation:** Ansible Vault, Secrets Management, KMS

Microservices & Application Deployment

- **Microservices Architecture:** Spring Boot, Node.js, Python, API Gateways
- **Containerized Deployment:** Docker, Kubernetes, Docker Compose, Helm, Istio, Linkerd
- **Service Mesh:** Istio, Linkerd
- **Deployment Strategies:** Blue-Green Deployment, Rolling Updates
- **Event-Driven Architecture:** Kafka, RabbitMQ, AWS SNS/SQS

Monitoring, Logging & Performance

- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Dynatrace, Cloud Watch, **CloudWaze**, New Relic.
- **Logging & Tracing:** CloudWatch, Fluentd.
- **System Troubleshooting:** Performance optimization, root cause analysis, resource monitoring

Content Delivery Networks (CDN) & Global Distribution

- **CDN Management:** AWS CloudFront, Akamai.
- **Caching & Performance Optimization:** Edge caching, content distribution, latency optimization

DevOps & DevSecOps Practices

- **DevOps Practices:** CI/CD, GitOps, Infrastructure as Code, Continuous Monitoring

- **DevSecOps Integration:** Automated Security Scanning, Vulnerability Management, SAST/DAST integration
- **Site Reliability Engineering (SRE):** Automation, monitoring, high-availability, and fault tolerance
- **Automation Frameworks:** Jenkins, Ansible, Terraform, Docker, Kubernetes

Tools & Technologies

- **Artifact Repositories:** JFrog Artifactory, Nexus Repository
- **CI/CD Plugins:** Jenkins Pipeline Plugins, GitLab CI/CD, AWS CodeDeploy, Azure DevOps
- **Cloud Security Tools:** AWS Security Hub, CloudTrail, GuardDuty
- **Cost Management:** AWS Cost Explorer, Azure Cost Management
- **Collaboration Tools:** Slack, Teams, Hipchat, JIRA, Confluence

CERTIFICATIONS ACHIEVED:

- **AWS Solution Architect - Associate**

PROFESSIONAL EXPERIENCE

Client: Topgolf

Dec 2024 - Present

Role: Sr.PlatformEngineer

Responsibilities:

- Designed and implemented Kubernetes-based deployment architecture from the ground up, leveraging custom-built Helm charts to standardize application deployments across environments (dev, staging, prod); ensured consistency, version control, and parameterized configurations.
- Built and managed RabbitMQ infrastructure both on-premise and via CloudAMQP, establishing queue standards, virtual hosts, user access policies, monitoring (via Prometheus/Grafana), and high availability clusters; led initiative to standardize messaging patterns across microservices.
- Led IAM infrastructure setup using Keycloak, configuring realms, clients, identity providers, and role-based access controls (RBAC); integrated with applications for SSO and OIDC flows, improving security posture and reducing manual access provisioning efforts.
- Provisioned and maintained CloudAMQP and AWS resources, including EC2, IAM policies, security groups, and S3; collaborated with developers to align message-driven architectures with auto scaling and fault-tolerant AWS components.
- Spearheaded PoC development efforts across multiple cross-functional teams, translating product requirements into technical implementations; coordinated demos and delivered production-ready integrations with asynchronous documentation for continuity and future reference.
- Automated application performance monitoring setup across environments using New Relic CLI and APIs.
- Analyzed APM traces and transaction data to identify and resolve performance bottlenecks in micro services.
- Tuned alert policies and thresholds to reduce alert noise while maintaining rapid incident response times.
- Deployed New Relic Infrastructure agent across EC2, Kubernetes, and on-prem servers to centralize observability.
- Collaborated with development teams to optimize service response times and reduce error rates through insights from New Relic dashboards.
- Set up custom dashboards, alerts, and SLO tracking to provide real-time visibility into key application metrics.
- Authored and maintained comprehensive, asynchronous documentation using tools like Confluence and Markdown; covered end-to-end system architecture, Helm deployments, RabbitMQ patterns, and IAM configuration, ensuring transparency and smoother team handoffs.
- Administered Rancher for Kubernetes cluster orchestration, managing namespaces, workloads, and access control policies; streamlined deployment management for development and QA teams.
- Developed and maintained CI/CD pipelines using GitHub Actions and Jenkins integrated with Helm and Kubernetes; automated testing, container builds, Helm packaging, and secure deployments with rollback strategies.

- Implemented observability and alerting using Observer and PagerDuty, configuring service-level objectives (SLOs), alert routing, and runbook documentation to minimize MTTR and enhance incident response workflows.
- Played a key role in standardizing infrastructure practices across teams, ensuring infrastructure-as-code (IaC) consistency, reusable Helm charts, and secure service-to-service communication patterns in a distributed system architecture
- Designed and configured AWS Application Load Balancers (ALB) with advanced routing (path/host-based), improving traffic distribution and uptime.
- Implemented blue-green and canary deployments using ALB, ensuring zero-downtime releases.
- Developed Route53 cross-region failover and latency-based routing, enabling active-active disaster recovery.
- Built CloudWatch dashboards, alarms, and custom metrics, improving observability and reducing MTTR.
- Implemented monitoring and observability solutions using **CloudWaze** for centralized log analytics, infrastructure visibility, and proactive alerting across distributed cloud environments.
- Leveraged CloudWaze dashboards and automated alert workflows to improve incident detection, root cause analysis, and operational reliability.
- Integrated observability with PagerDuty for automated incident response workflows.
- Defined SLIs/SLOs and tracked service health, improving reliability and uptime.

Technologies: AWS, Jenkins, Docker, Kubernetes (EKS), GitLab CI/CD, Prometheus, RabbitMQ, KubeFlow, CloudTrail, AWS Config, Python, Bash, PowerShell, AWS Lambda, Rancher, Keycloak, IAM, CloudWaze

Client: Capital One

Dec 2022 - Dec 2024

Role: Sr.AWS DevOps Engineer / Sr.Software Engineer

Responsibilities:

- **Architected and designed highly scalable, secure, and fault-tolerant cloud infrastructure** on AWS, utilizing services like EC2, S3, RDS, and Lambda to support enterprise-level applications and ensure high availability and resiliency.
- **Implemented and managed CI/CD pipelines** using Jenkins, GitLab CI/CD, and Azure DevOps, automating software deployment processes and reducing manual errors, cutting deployment times, and enhancing team collaboration.
- **Spearheaded containerization efforts**, deploying Docker-based microservices and orchestrating Kubernetes clusters (EKS), achieving better resource optimization and scaling for high-availability environments.
- **Proficient in Infrastructure as Code (IaC)** using Terraform for automating infrastructure provisioning and Ansible for configuration management, ensuring consistency across multi-cloud environments.
- Developed and maintained **Ansible Playbooks** to automate application deployments, **configuration management**, and system updates. Utilized Ansible modules (e.g., yum, apt, copy, template) to streamline tasks like package installation and service orchestration, reducing manual intervention by 70%. Integrated Ansible with CI/CD pipelines, enabling automated testing and deployment, resulting in a 40% decrease in deployment times.
- **Optimized cloud security** by implementing **IAM best practices** such as **role-based access control (RBAC)** and **least-privilege principles**, safeguarding sensitive data and ensuring regulatory compliance across AWS and other cloud platforms.
- **Designed and developed MLOps pipelines** using KubeFlow and MLflow enabling streamlined model training, deployment, and monitoring in a cloud-native environment.
- **Implemented AWS security monitoring tools** like CloudTrail and AWS Config for real-time threat detection, ensuring auditability and compliance with security policies.
- **Developed Python automation scripts** to enhance operational efficiency, handle incident management, and automate artifact scanning with whitelist/blacklist capabilities.
- **Developed and maintained Python automation scripts** to streamline repetitive tasks, improving operational efficiency and consistency. Demonstrated expertise in writing clean, modular, and efficient **Python** code for various automation and **cloud management tasks**, including artifact scanning with whitelist/blacklist capabilities.
- Led **successful database migrations** from PostgreSQL to Aurora PostgreSQL on AWS, minimizing downtime and ensuring seamless transition while optimizing performance.

- Strong expertise in managing distributed databases such as Cassandra, and relational databases like Oracle and PostgreSQL for high performance and reliability.
- **Integrated RabbitMQ** for efficient decoupling of microservices, implementing high-availability clusters with mirrored queues, and optimizing message durability and failover.
- **Implemented disaster recovery strategies with AWS services**, ensuring high availability and minimal downtime during system failures, optimizing system performance and business continuity.
- Designed **Route53 DNS strategies (failover, latency-based routing)** for global application availability.
- Implemented **Application Load Balancers with auto-scaling integration**, improving system scalability.
- Built proactive monitoring using **CloudWatch, Prometheus, and Grafana**, reducing incident detection time.
- Created **custom CloudWatch metrics and alerts**, enabling early detection of system failures.
- Utilized **CloudWaze** for centralized monitoring, log aggregation, and operational analytics across AWS cloud infrastructure.
- Configured CloudWaze alerts and dashboards to proactively identify infrastructure bottlenecks and improve incident response times.
- Reduced MTTR through **automated alerting and incident response pipelines**.
- Designed scalable **DynamoDB architectures with auto-scaling**, ensuring low-latency and high throughput.
- Leveraged **DynamoDB Streams + Lambda** for event-driven reliability patterns.
- Improved system reliability by implementing **fault isolation and resilience patterns**.
- **Mentored junior engineers**, providing technical guidance and fostering collaboration within teams for cloud migration, automation, and optimization projects.
- Designed **serverless architectures** using **AWS Lambda** and other serverless services, reducing operational costs and enabling auto-scaling for cloud applications.
- **Optimized infrastructure performance** by using **AWS CloudWatch, Prometheus, and Grafana** for proactive monitoring, identifying bottlenecks, and resolving performance issues across cloud environments.
- **Led cost optimization initiatives** that reduced AWS service costs by 40% through efficient instance rightsizing, Reserved Instances, and improved storage utilization.
- Developed **reusable Terraform modules** to streamline infrastructure provisioning on **AWS and Azure**, ensuring consistent and scalable deployments across multiple environments.
- **Implemented and managed API management** using **APIGEE**, ensuring the security, scalability, and availability of APIs for enterprise applications.
- Deployed **security monitoring tools** and established best practices for continuous auditing, ensuring rapid detection and response to potential threats.
- **Optimized CI/CD pipelines**, reducing deployment times by over 50% and enhancing the software delivery process through automation, integration, and testing best practices.
- Continuously updated security measures in response to evolving threats, ensuring cloud environments remain secure and compliant. Stayed informed on **AWS CloudFormation** best practices, new features, and industry trends to maintain and improve infrastructure automation processes.
- Worked With **JIRA** add-ons like **ScriptRunner, Xray, or Automation for JIRA**.
- Collaborated with multiple teams to ingest data from various sources, including **Network, Storage, VMware, OpenShift, and Database environments**, using agents like **Packetbeat, Metricbeat, Syslog, and Fluentd**.

Technologies: AWS (EC2, S3, VPC, RDS, IAM, CloudFormation, Lambda), GCP, Azure, Jenkins, Docker, Kubernetes (EKS), Ansible, Terraform, GitLab CI/CD, Prometheus, Grafana, APIGEE, RabbitMQ, Aurora PostgreSQL, Cassandra, MLflow, Kubeflow, TensorFlow Extended (TFX), CloudTrail, AWS Config, Python, Bash, PowerShell, AWS Lambda, SonarQube.

Client: DXC Technologies

Aug 2021 – Dec 2022

Role: Multi Cloud DevOps Engineer

Responsibilities:

- **Architected, implemented, and managed scalable cloud infrastructure** on **Microsoft Azure**, ensuring high availability, performance, and security across enterprise-level applications.
- **Designed and deployed Infrastructure as Code (IaC)** using **Terraform** and **Azure Resource Manager (ARM) templates**, creating reusable, modular infrastructure components for consistent and automated deployments across **Azure** and **AWS** environments.
- **Developed and managed CI/CD pipelines** in **Azure DevOps**, automating software delivery, infrastructure provisioning, and integrating security, testing, and monitoring tools to improve deployment efficiency and reduce lead times.
- **Provisioned and configured Azure resources**, including **Virtual Machines (VMs)**, **Azure App Service**, **Azure Functions**, **Azure SQL Database**, **Azure Blob Storage**, and **networking components**, enabling the development of resilient and cloud-native applications.
- **Implemented security best practices** by leveraging **Azure Security Center**, **Azure Active Directory (AAD)**, and **network security groups (NSGs)** to enforce compliance with industry standards (GDPR, ISO/IEC 27001). Conducted regular security audits to ensure infrastructure integrity.
- **Optimized cost and performance** by implementing **auto-scaling**, **load balancing**, and **monitoring solutions** using **Azure Monitor** and **Azure Log Analytics**, reducing operational costs by identifying and decommissioning underutilized resources.
- **Managed databases within Azure**, including **Azure SQL Database**, **Azure Cosmos DB**, and **Azure Storage**, implementing **backup and disaster recovery strategies** to ensure data integrity and business continuity.
- **Migrated on-premises infrastructure to Azure**, collaborating with cross-functional teams to ensure seamless transitions, minimal downtime, and data integrity.
- **Deployed and optimized the ELK Stack (Elasticsearch, Logstash, Kibana)** to streamline logging and data visualization. Configured **Beats agents (Filebeat, Metricbeat, Packetbeat)** for centralized log collection and processing within **Logstash** and **Elasticsearch**.
- **Implemented Azure Monitor and Log Analytics** for real-time insights into application performance and infrastructure health, setting up custom dashboards and alerts for proactive issue resolution.
- **Integrated security and identity management** by configuring **Azure Active Directory (AAD)** for authentication, access control, and secure identity federation across cloud and on-premise environments.
- **Automated infrastructure scaling and high availability** using **ARM templates**, optimizing resource provisioning and ensuring efficient workload distribution.
- **Expertise in multi-cloud environments**, leveraging **AWS**, **GCP**, and **Azure** for cloud infrastructure, orchestration workflows, and model hosting.
- Implemented high availability and auto-scaling strategies across **Azure** and **AWS** environments.
- Built monitoring and alerting systems using **Azure Monitor**, **CloudWaze** and **Log Analytics**, improving operational visibility.
- Applied SRE practices for incident management, root cause analysis, and **reliability improvements**.
- Automated infrastructure provisioning with **Terraform**, ensuring consistency and reduced failure rates.
- Designed resilient cloud architectures supporting enterprise workloads with minimal downtime.

Technologies: Azure, Terraform, Azure DevOps, ARM Templates, GCP, AWS, Docker, Kubernetes, Azure App Service, Azure Functions, GitLab, Azure Security Center, ELK Stack (Elasticsearch, Logstash, Kibana), Azure Monitor, Log Analytics, Azure SQL Database, Azure Cosmos DB, Azure Active Directory (AAD), Network Security Groups (NSG).

Client: Elation Health, San Francisco, CA

Mar 2021 – Aug 2021

Role: AWS_DevOps/System Software Engineer (ELK SME)

Responsibilities:

- **Led the migration from local Terraform configurations to Terraform Cloud**, optimizing infrastructure management by configuring **workspaces, backend settings, repositories, and permissions**. Ensured seamless deployment and lifecycle management using **modularized and reusable Terraform code** following best practices.
- **Proficient in multi-cloud platforms (AWS, GCP, Azure)**, managing hosting models, orchestration workflows, and optimizing cloud resources for high availability and scalability.
- **Collaborated with cross-functional teams** to gather infrastructure requirements and translated them into **efficient, secure, and compliant Terraform configurations**. Developed and maintained Terraform scripts for the entire infrastructure lifecycle, including **creation, modification, and destruction of resources**.
- **Integrated Terraform with CI/CD pipelines**, automating infrastructure provisioning and updates. Developed **GitHub Actions workflows** from scratch, including **pre-commit hooks** for **tfsec** scans, ensuring security best practices and compliance before committing code.
- **Upgraded AWS Terraform provider from 2.6 to 3.0**, optimizing Terraform configurations and enhancing resource provisioning by integrating **CloudWatch alarms** for real-time monitoring and automated alerts.
- **Developed Python automation scripts** to manage **PagerDuty maintenance windows** during deployments, reducing manual interventions and improving operational efficiency. Automated **Terraform formatting checks** using **GitHub Actions** to ensure consistency in infrastructure code.
- **Deployed, configured, and optimized the ELK Stack (Elasticsearch, Logstash, Kibana)** to enhance centralized logging, data visualization, and real-time monitoring across infrastructure. Installed and managed **Beats agents (Filebeat, Metricbeat, Packetbeat)** for **log collection and system metrics** from distributed environments.
- **Ingested data from multiple sources**, including **Network, Storage, VMware, OpenShift, and Database environments**, using **Fluentd, Syslog, and Beats agents**. Implemented **Index Lifecycle Management (ILM)** policies to optimize **Elasticsearch** storage and retention strategies.
- **Designed and deployed machine learning jobs in Elasticsearch**, implementing **anomaly detection and trend forecasting** to improve predictive analytics. Created **custom dashboards and templates** in Kibana for real-time data visualization and system insights.
- **Configured TLS/SSL security for x-pack**, implementing **self-signed certificates**, securing ELK components, and integrating **email alerts & ServiceNow webhooks** for priority ticket escalation.
- **Documented Terraform Cloud best practices** to enhance operational transparency and team collaboration, ensuring efficient infrastructure management.
- **Designed and implemented Kafka-based event-driven architectures**, enabling **real-time data streaming and microservices communication** with scalable, fault-tolerant solutions.
- **Developed and optimized Kafka producers and consumers in Python/Java**, ensuring high throughput, low latency, and efficient message processing.
- **Managed Kafka clusters**, configuring **topic creation, partitioning strategies, replication, and retention policies** for optimal performance and data durability.
- **Integrated Kafka with AWS services** such as **MSK, Lambda, S3, and Glue** for seamless data processing and storage.
- **Implemented Kafka Connect** with custom connectors for **automated data ingestion** from various sources.
- **Monitored and optimized Kafka performance** using **Prometheus, Grafana, and Confluent Control Center**, ensuring system reliability and operational efficiency.

Technologies: Terraform, Terraform Cloud, AWS (EC2, VPC, ELB, S3, RDS, IAM, EKS, GCP, CloudTrail, AWS Config), Jenkins, GitHub, AWS CloudWatch, Elasticsearch, Logstash, Kibana, Beats Agents (Filebeat, Metricbeat, Packetbeat), Python, Bash, x-pack TLS/SSL, tfsec, Kubernetes, Kafka, MSK, Linux (RHEL, Ubuntu).

Client: Modo Payments, Dallas, TX

Jul 2020 – Mar 2021

Role: Sr.AWS_Cloud/DevOps Engineer

Responsibilities:

- **Designed and deployed AWS infrastructure** using **CloudFormation** scripts, fully integrated with **Jenkins CI/CD pipelines** to automate deployments across Development, Integration, and Production environments. Eliminated manual intervention, ensuring efficient, repeatable, and consistent infrastructure provisioning.
- **Developed and maintained AWS CloudFormation templates** to automate the creation of AWS resources, including **EC2, VPC, RDS, and IAM**, optimizing deployment processes and ensuring safe infrastructure changes through change sets.
- Managed **AWS Kubernetes (EKS) clusters**, utilizing **CloudFormation** to update clusters and nodes across multiple environments. Developed **Kubernetes deployment scripts** to ensure best practices for scalable and resilient microservices architectures.
- Collaborated with cross-functional teams to ingest data from various sources such as **Network, Storage, VMware, OpenShift, and Database** environments, using agents like **Packetbeat, Metricbeat, Syslog, and Fluentd** for efficient data collection.
- Implemented **monitoring solutions** for **Kubernetes clusters** using **Prometheus** and **Grafana**, designing custom dashboards for cluster and node-level health monitoring. Configured **Alertmanager** to send real-time notifications via **Slack**, enabling proactive infrastructure management.
- Deployed **Service Mesh technologies** like **Istio** and **Linkerd** for traffic management and application observability, ensuring successful deployment across all environments, including **production**, for advanced monitoring of microservices.
- Assisted in setting up **RDS instances** backed by **PostgreSQL**, facilitating seamless data migrations through **cluster snapshots** across multiple AWS accounts and regions. Ensured data integrity and minimal downtime during migrations.
- Designed and implemented a **disaster recovery pipeline** using **Jenkins**, with **Helm charts** to automate end-to-end infrastructure deployment in multiple AWS regions, ensuring high availability and zero downtime for critical applications.
- Spearheaded **AWS cost optimization** by decommissioning unused AWS accounts and freeing up resources without impacting dependent applications, resulting in significant cost savings and adhering to AWS resource management best practices.
- Acted as **Subject Matter Expert (SME)** for **IAM roles, policies, and user management**, ensuring security best practices were followed. Contributed to **PCI compliance** efforts by identifying public-facing IPs and addressing vulnerabilities via **Qualys PCI scans**. Implemented **AWS Config** for auditing and compliance with security and operational policies.
- Utilized **AWS Config** for continuous auditing of infrastructure changes, ensuring alignment with internal governance policies and automating the identification of misconfigurations for timely remediation.
- Collaborated with cross-functional teams to refine infrastructure configurations, document procedures, and ensure alignment with business goals. Developed **runbooks** and **SOPs** to facilitate operational excellence and knowledge sharing.

Technologies: AWS (EC2, VPC, ELB, S3, RDS, IAM, EKS, CloudTrail, AWS Config, Route 53), AWS CloudFormation, Terraform, Jenkins, Bitbucket, Helm, Prometheus, Grafana, CloudWatch, Kubernetes, Docker, Istio, Linkerd, PCI DSS, IAM, AWS Config, Qualys PCI Scans, Linux (RHEL, Ubuntu).

Client: Neiman Marcus, Irving, TX

Jan 2018 – Jul 2020

Role: Sr. AWS/DevOps Engineer

Responsibilities:

- Contributed to various projects, including **Progressive Web Apps** and **e-commerce websites**, focusing on building scalable, high-performance applications.
- Implemented **Groovy-based Jenkins templates** to create automated pipelines for continuous integration and deployment (CI/CD) into AWS.
- Gained expertise in using **serverless YML** to define and deploy **serverless AWS resources** through AWS CloudFormation stacks.
- Developed and maintained **AWS CloudWatch Insights**, custom metrics, dashboards, and alarms to monitor and optimize system performance.

- Extensively worked with **Splunk** for log querying, dashboard creation, and setting up alerts for application monitoring.
- Deployed and managed applications on **Heroku**, ensuring high availability and scalability for web services.
- Worked with **PostgreSQL** databases backed by **AWS RDS**, optimizing database performance and reliability.
- Implemented data ingestion into **AWS DynamoDB** using **AWS Lambda** and **Python Boto3 SDK** for seamless data processing and storage.
- Leveraged **AWS DynamoDB streams** to process incoming data and indexed it to **AWS Kibana** for visualization and alerting.
- Utilized a wide range of **AWS services** including **S3**, **DynamoDB**, **CloudWatch**, **IAM**, **Lambda**, **SQS**, **SNS**, and **Parameter Store** for effective resource management.
- Launched a **Progressive Web Application (PWA)** for omni-channel selling, leveraging **serverless components** like **AWS Lambda** and **API Gateway**, with **DynamoDB** for high-performance data processing.
- Designed and implemented **log streaming** from **CloudWatch** to **Splunk** servers using **AWS Kinesis Firehose** for centralized log management.
- Led **P1/P2 incident management**, including triage, troubleshooting, and root cause analysis, ensuring timely stakeholder communication and issue resolution.
- Built and managed the operations team supporting the company's **Digital Commerce Transformation**, ensuring seamless application performance and uptime.
- Maintained **Jenkins CI/CD pipelines** and integrated with **GIT** and **Maven** for automated build and deployment processes.
- Acted as an **SRE** to manage distributed applications across **hybrid AWS** and physical data centers, ensuring high availability and fault tolerance.
- Developed **Jenkins pipelines** using **Groovy**, automating **blue/green deployments** in **AWS** with infrastructure provisioning via **Terraform** and **Ansible**, enabling smooth application deployments.
- Utilized **Terraform** to create custom **VPCs**, **Subnets**, and **NAT gateways**, ensuring successful deployment of web applications, **ELK** stacks, and databases.
- Worked on **Kubernetes** deployments, creating replication sets and **Helm charts** for efficient application management and monitoring via **Prometheus** and **Grafana**.
- Integrated **Maven** with **GIT** for project versioning and built **Java/J2EE** applications using **Ant/Maven** for automated build processes.
- Optimized **EC2 instances**, **volumes**, and **VPCs** for cost efficiency and performance improvements.
- Executed **SQL queries** to implement schema changes for internationalization support, ensuring compatibility with multiple regions and languages.
- Implemented **ETL process monitoring**, capturing DML transactions for reporting, and designed logging systems for data pipeline monitoring.
- Set up and maintained on-prem **ELK stack**, processing data from multiple sources to provide insights and analytics.
- Integrated **Kafka** with **ELK** for real-time data ingestion and logging.
- Collected data from various sources using **Beats**, **syslogs**, and **PowerShell scripts** to enable effective monitoring and analytics.
- Monitored application performance and infrastructure health using tools like **Splunk**, **Dynatrace**, and **CloudWatch** for proactive issue detection.
- Developed and maintained **Splunk dashboards** and set up **alerts** for monitoring development and production environments.
- Managed **SSL certificates** for enterprise applications, ensuring secure communication by integrating certificates with products such as **Apache Tomcat** and **AWS ELB**.

Technologies:Linux, Docker, Jenkins, ANT, Maven, Shell, GIT, Python, YAML, Terraform, Ansible, AWS (EC2, VPC, ELB, S3, RDS, IAM, EKS, CloudTrail, Route 53), Bitbucket, VPC, EBS, SQL, CloudWatch, CloudFormation, Splunk, Prometheus, Grafana, Kubernetes, Helm, Kafka.

Client: DST Systems (Data·Sys·Tance), Kansas City, MO

Jun 2017 – Jan 2018

Role: AWS/DevOps Engineer

Responsibilities:

- Collaborating with the development team to enhance deployment processes by implementing CICD
- Designed, configured, and deployed Microsoft Azure for a multitude of applications utilizing the Azure (Including Compute, Web & Mobile, Blobs, ADF, Resource Groups, HD Insight Clusters, Azure SQL, Cloud Services, and ARM), focusing on high-availability, fault tolerance, and auto-scaling.
- Involved in designing application architecture to meet high availability application architecture and security parameters.
- Connected user requests to infrastructure running in AWS such as Amazon EC2 instances, Elastic Load Balancing load balancers, or Amazon S3 buckets and outside AWS using Amazon Route 53.
- Created Route tables to route the traffic to find whether it is a public or private network.
- Worked and administered different Linux (Red Hat Linux) hosts.
- Wrote Puppet manifest to automate configuration of a broad range of services and was involved in setup and configuration of Puppet configuration Management.
- Set up Puppet master, and client and wrote scripts to deploy applications on Dev, QA, and production.
- Experience working on several Docker components like Docker Engine, Docker Hub, Docker Machine, Docker Compose, and Docker Registry. Created multiple Containers with Specific Run Times and Proxying using NGINX for Virtual Hosting of Multiple Containers in a Single Docker Host
- Maintained and administered Gerrit code review tool and Integrated with GIT and Jenkins for code review, and code merge.
- Created Branches, Labels and performed Merges in Gerrit and GIT
- Developed Jenkins module for performing various builds using Groovy.
- Worked in an agile development team to deliver an end-to-end CI/CD product in an open-source environment using tools like Puppet & Jenkins.
- Developed Splunk module to perform log monitoring of different service logs.
- Worked partly on Oracle12g Puppet module and used Oracle DB for insertions, dumping, and backing up of data for Gerrit service.
- Developed Shell scripts for different uses over different services.
- Managed build results in Jenkins and deployed using workflows.
- Worked on creating Docker images, containers, and registry.
- Implemented a Continuous Delivery pipeline with Docker, Jenkins, and GitHub.
- Created and modified existing Dockerfile.
- Experience working with Docker Swarm and Docker Compose.
- Good experience in writing UNIX scripts, Perl scripts, Maven, and Ant.
- Used Ruby to create various templates in different Puppet modules.
- Experience in Package Management using RPM/YUM/apt-get and Red Hat Satellite server.
- Configured kickstart server and updated/applied patches to the servers using the RedHat Satellite server.
- Deployed the Java applications into web application servers like Apache, and Tomcat.
- Integrated GIT into Jenkins to automate the code check-out process.
- Debug and resolve Pre-Post OpenStack deployment failures.
- Used scripting languages Ruby, and Shell to develop various scripts.
- Created RPMs for usage with Puppet modules while creating various Red Hat Linux VMs.
- Installed, configured, and administered Apache, JBoss, and Tomcat.

Technologies: Linux (RHEL), Unix, Puppet, Jenkins, Maven, GIT, Gerrit, Splunk, Docker, Apache, Ruby, Shell, JSON, Python, Ansible, HTML, CSS, AWS, AZURE.

Client: EFH (Energy Feature Holdings), Dallas, TX

May 2016– May 2017

Role: DevOps Engineer

Responsibilities:

- Worked on load balancer(F5) setting up ASM rules
- Identified a rule that was blocking the genuine user traffic because the rule was searching in URL for all SQL query-related words like select, drop, from, etc., and blocking the requests. worked with the Developer and other teams in URL formation. Also, to avoid these kinds of issues further I worked on refining the rule.
- Working on Vulnerability tasks.
- Worked on updating load balancer F5 and switching it back from primary to secondary and vice versa minimizing the downtime, also I updated the TLS version from 1.0 to 1.1 supporting the team 24X7.
- Drive and develop peers to promote collaboration, learning, and productivity.
- Created templates for handling common batch job problems, trained teammates on how to use them, and held an inter-team contest to see who could handle the most tickets following the new process.
- Provide training and project handoff materials to client Managed Services teams to support e-commerce solutions independently.
- Master Sitecore e-commerce implementation and best practices.Became Subject Matter Expert in Sitecore installation, deployments, and monitoring. Documented procedures developed proof-of-concepts, trained team members, and presented the challenges and implementation plans to stakeholders and the President of the company.
- Responsible for the design and maintenance of the GIT repositories, different branching & merging strategies, Views, and access control strategies and Integrated GIT into Jenkins to automate the code check-out process.
- Developed Build and Deploy scripts using Maven as build tools for Java applications in Jenkins to move from one environment to another environment and also created new jobs and pipelines through Jenkins.
- Integrated services like GitHub, AWS Code Pipeline, Jenkins, and AWS Elastic Beanstalk to create a deployment pipeline.
- Experience deploying and maintaining multi-container applications through Docker.
- Involved in provisioning and Automation servers on public cloud like AWS and Kubernetes.
- Experience on Vagrant, AWS, and Kubernetes-based container deployments to create self-environments for dev teams and containerization of env's delivery for releases.
- Used ticketing tool JIRA and also triggered the issues and maintained bugs using the Jira tool.
- Involved in various phases of application development and developed systems going through Agile, and Scrum methodology.

Technologies: Linux, Java, SVN, Perl, YAML, PHP, Jenkins, Maven, GIT, AWS, Docker, Kubernetes, CloudFormation Apache, Ant, JIRA, Shell, SonarQube, MySql, Nexus, Python, JSON, Ansible, Kubernetes.

Client: Radiant Technologies, India

Oct 2014– Sep 2015

Role: Build & Release Engineer

Responsibilities:

- Creating repositories, branches, and tags in GIT and BITBUCKET and assisting the developer to fix merging issues to implement the parallel development process.
- Performed all necessary day-to-day Subversion/CVS support for different projects.
- Created the branches in Subversion and Perforce to implement the parallel development process.
- Developed startup and automated scripts using Bash Shell Scripting and Python.
- Automated build process with Build Automation tools like ANT and MAVEN
- Performed software configuration/release management activity for Java applications.
- Designed and implemented the Continuous Integration (CI)process using tools like Jenkins with approvals from development and other affected teams.
- Developed automation framework for Application development to the cloud environment.
- Implemented AWS services EC2, ELB, EBS, Elastic Search, Auto Scaling groups, Cloud Watch, and Elastic Cache as part of cloud infrastructure.
- Used Atlassian Confluence to create notes, project plans, and file collaboration.
- Worked with Puppet Enterprise which is an application release orchestration for environment management and release coordination.
- Monitoring the progression of releases and keeping them on track for delivery on planned release date.
- Expertise in Jira in issuing tickets project management, change management, and release management.

Technologies: Bitbucket, Ant, Maven, Jenkins, Apache, Python, AWS, Shell script, Atlassian confluence, Jira

Client: Mind Tree, India

Dec 2013 – Sep 2014

Role: Systems Engineer

Responsibilities:

- Installing and configuring ESXi 4/5/6 using custom-based ISO's and Boot From SAN-based installs on several hundred CISCO UCS B200s, and B250s as required for UAT/Production deployments of Windows 2003/2008 and RHEL deployments.
- Worked on creating and managing user accounts, security, rights, disk space, and process monitoring in Solaris and Red Hat Linux.
- Used SCP and SFTP to transfer files from one system to another.
- Automating Deployments and providing automation.
- Installation and configuration of JBoss, Web Sphere Application Server on Solaris and Linux.
- Working experience in data migration using Python.
- Configured Virtual Linux/Ubuntu machines using Oracle Virtual Box for testing purposes.
- Creating Active Directory user and security group creation in domains, creating shares, and designating permissions for specific groups.
- Worked on Active Directory-related issues such as Logon failures, Replication issues, and authentication problems.
- Worked on active directory profile management.

Technologies: Linux, Windows 2003, 2008 TCP/IP, Shell, Python, SQL, Oracle, NFS.

EDUCATIONAL QUALIFICATIONS:

- **Masters in Computer Science – OKCU - 2017**
- **Bachelors in Computer Science – JNTUH - 2013**
- **Diploma in Computer Science – SBTET -2010**
